Particle in a potential well
& linearizing nonlinear ODEs

Consider a potential $V(x)$ and imagine sliding a 'bead' on this surface

Force \Rightarrow Force is $F = -\frac{\partial V}{\partial x}$ $m \ddot{x} = -\frac{\partial U}{\partial x}$ $m=1$

$$\ddot{x} = -\frac{\partial U}{\partial x}$$

Let's write Lagrange

kinetic energy $T = \frac{1}{2} \dot{x}^2$

pot. $U(x)$

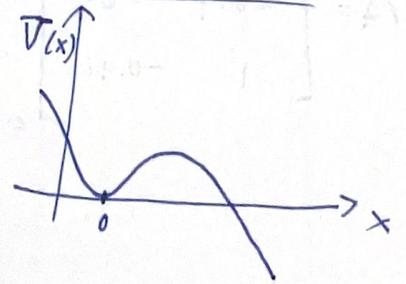

Lagrangian: $L(x, \dot{x}) = T(\dot{x}) - U(x)$

Euler Lagrangian Equation: $\frac{d}{dt} \frac{\partial L}{\partial \dot{x}} - \frac{\partial L}{\partial x} = 0$

principle of least action

$$\ddot{x} = \frac{\partial L}{\partial x} = -\frac{\partial U}{\partial x}$$

Ex: $\ddot{x} = -x + x^2$ (i.e. $U(x) = \frac{x^2}{2} - \frac{x^3}{3}$)

\downarrow
 $\dot{x} = v$
 $\dot{v} = -x + x^2$ } fixed points $\rightarrow x=0, 1$
 $v=0$
